

SurVIS™ GT17 Series NVR Digital Video IP Surveillance

The GT17 Series of SurVIS Network Video Recorders from VNS, a performance leader in video processing and archiving, is a scalable control and archive platform targeted for high-end IP video surveillance applications.

VNS NVRs ship with Windows XP PRO and can be configured with commercially available digital video surveillance management software to provide a complete NVR solution. The GT17 series of products optimize performance for large camera count applications such as airports, casinos, correctional facilities, municipalities and shopping centers. The NVR provides the ability to record and retrieve video and monitor alarms on a single appliance. Architected for scalability the GT17 platform can be optimized for footprint (3U or 4U), video processing power and archive capacity. This flexibility allows VNS to build each GT17 to our customers specifications. VNS NVR systems are designed to work on any networking protocol that supports TCP/IP.

In green field installations or system upgrades, network surveillance systems like those offered by VNS are an excellent choice to meet end user's increasing demands from their security systems.

VISTA Networking Solutions

Key Features:

- Real Time - Live simultaneous all channel / camera viewing
- Video motion detection, record on detection
- Intel Xeon Processors and 800 MHz FSB
- Dual 10/100/1000 Ethernet Ports
- SATA RAID (or non-RAID) configuration and DVD+/- 16X RW
- Redundant power and cooling
- Application protection fail over on Operating System drives
- Data protection fail over on storage drives
- Smart Uninterruptible Power source for back up power and smooth system shut down

Software Features:

- View and Record at up to 30 fps per camera.
- Capable of supporting upwards of 64 cameras
- Provides high resolution, digital quality, recording.
- Unlimited recordings per server.
- Support for integrated synchronized audio and video monitoring and playback.
- Record video to several storage points.
- Easy to operate user friendly interface.
- Secure time stamped and watermarked recordings.
- Searchable archives, frame by frame, or time based folder by folder.
- Manage multi-site surveillance.
- Motion detection.
- Integrates with IP addressable alarm systems.
- Admin password for settings changes.
- Alarm notification by e-mail, pager, cell phone or audio alert on Server.
