

SurVIS™ LT08 Series NVR Digital Video IP Surveillance

The LT08 Series of SurVIS Network Video Recorders from VNS, a performance leader in video processing and archiving, is a scalable control and archive platform targeted for low-end IP video surveillance applications.

VNS NVRs ship with Windows XP PRO and can be configured with commercially available digital video surveillance management software to provide a complete NVR solution. The LT08 series of products optimize performance for low camera count applications such as residential, small office or retail, ATMs and home construction sites. The NVR provides the ability to record and retrieve video and monitor alarms on a single appliance. Architected for scalability the LT08 platform can be optimized for footprint, video processing power and archive capacity. This flexibility allows VNS to build each LT08 to our customers specifications. VNS NVR systems are designed to work on any networking protocol that supports TCP/IP.

In green field installations or system upgrades, network surveillance systems like those offered by VNS are an excellent choice to meet end user's increasing demands from their security systems.

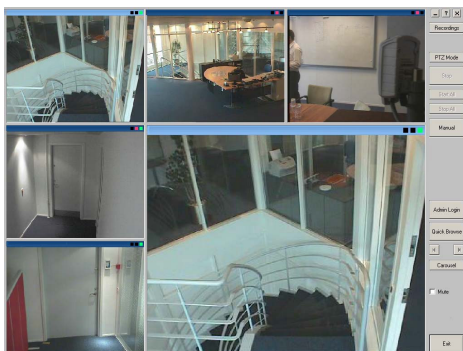

VISTA Networking Solutions

Key Features:

- Performs simultaneous recording and viewing from an unlimited number of cameras
- Captures images up to 30 frames per second (fps)
- Remote access (viewing)
- Transferred video and audio can be encrypted and password protected
- Intel Pentium 4 Processor and 800 MHz FSB
- SATA non-RAID storage configuration and DVD+/- 16X RW
- Single 10/100/1000 Ethernet Port
- Motion detection can trigger alarms or send e-mail
- Motion detection area definition
- Date and time stamps
- Add text or overlays to images
- Scheduled archiving
- Password protected archives
